# About IT Catalyst

## Key Features

### 1. Employer Registration & Job Posting

Employers register and post jobs using a simple interface with manual data entry for job title, description, requirements, and other details.

### 2. Candidate Registration & AI Resume Creation

Candidates provide basic details like name, education, and job preference, and the system helps them build a structured, readable resume using pre-defined templates.

### 3. Resume Parsing & Screening

Uploaded resumes are scanned to extract relevant fields such as skills, experience, and qualifications, which are then displayed to recruiters for manual review.

### 4. Job Search & Application Process

Candidates explore jobs through filters like industry, city, and title, and apply by uploading their resume and writing a short message if required.

### 5. Online testing

Shortlisted candidates complete role-based quizzes or coding tasks within the system, while test activity is monitored and scored through built-in mechanisms.
